Treasurer :
P. SURENDRA REDDY
Cell : 9440845379

To,
The Chairman,
Telangana Electricity Regulatory Commission
Vidyut Niyamtran Bhavan, GTS Colony,
Kalyan Nagar,
HYDERABAD, TELANGANA

Sub: Connected load vs Consumption Load.

Ref: LT Industries below 75HP

Dear Sir/Madam,

We are requesting to bring to your kind attention an matter concerning the micro and small industries, which are predominantly run by technocrats.

Industries typically obtain sanction load based on their specific requirements. The meters, installed after 2010, accurately reflect the maximum power consumed over the past three months. Furthermore, every month, the concerned Assistant Engineer (AE) or Inspector visits the premises to take readings and verify the maximum load utilized.

Currently, D.P. officers are visiting small industries and noting the connected load. It is important to note that the connected load can sometimes appear higher due to temporary machinery kept on the premises, while other machines may be off or unutilized during inspection. For Special Purpose Machine (SPM) manufacturers, the connected load might be higher, but the actual utilized power is often less than the sanctioned load.

In the past, manual meters necessitated a focus on connected load. However, with the advent of electronic meters.

The AE can accurately check the consumed load every month.

We are deeply concerned that D.P. officers are pressuring industries to enhance their power and issuing penalty notices to owners, rather than relying on the maximum utilize load.

We respectfully request that the AE and line inspector be empowered to check and, if necessary, warn industries to reduce their load. Only if industries continue to draw or utilize more than the sanctioned load after such warnings should penalties be imposed.

We urge you to look into this matter favourably and take necessary action to protect these industries from harassment by D.P. officers.

Thank you for your time and consideration.

P Sudhir
PNMIASS,
Chairman,
Patancheru.
