
Dear Sir,

Myself Ganumukkala Subramanyam - PPA No. 337, dated 9/08/2025 holder for 2 MW. My project is under the advanced stage of Commissioning. The Punjab National Bank (PNB) sanctioned a loan of Rs.6.1 Crores for 2 MW considering tariff of Rs.3.13/kwh. With the revision of Tariff the project is not at all viable due the following reasons:

1. Over the years the project cost per MW has increased due to increase in Panel cost.
2. The HT / LT cable cost has increased due to an increase in all metal costs - copper and Aluminum
3. The structure cost has increased due to increase in Iron cost and also increase in Diesel cost for Transportation.
4. The Transformer cost also increased due to price rise in Copper and Aluminum.
5. The Transmission line cost taken by ERC is Rs.10 Lakhs (earlier for tariff calculation) , whereas the Estimate given by TGSPDCL for 3.5 KM distance is Rs.64 Lakhs, which does not include the Bay Extension cost.
6. The labour cost has increased over a period.
7. The O&M cost has increased due to manpower / material/ spare parts cost.

With all the above reasons, infact the Tariff has to be increased by ERC. We strongly oppose a reduction in Tariff from Rs.3.13/kwh and request to increase the Tariff based on the present Cost of the Solar Project, considering all actual costs.

This is our humble Request from all the Farmers Community.
