To,
The Chief General Manager (Comm),
TSSPDCL, Mint Compound,
Hyderabad

Dear Sir,

Sub: Representations on Power Tariff 2015-16 - Reg.

We are one of the biggest HT Consumers (NLG-162) in Nalgonda Circle and wish to bring to your kind notice the following points for consideration in the Power Tariff Rates, Terms and Conditions for 2015-16.

- 1) The cement industry as such is not in a position to absorb the hike of Demand and Energy charges proposed in the Tariff Schedule announced for 2015-16. Therefore, may please retain the existing Tariff of 2014-15.
- 2) The Cross Subsidy surcharge on OA consumers should not be imposed for 2014-15 and 2015-16 as there has been power cut for industries till Nov-2014. Last power cut was on 20th of Nov-2014.
- 3) We have installed and commissioned Captive Power Plant of 50.40 MW in Vishnupuram falling under Nalgonda Circle to cater our power requirement of units located in Malkapur (RR Dist), Chilamkur and Yerraguntla (Cuddapah Dist). We are exporting power to our units every month. But to comply the Tariff conditions existing as of now, we have been forced to **stop export** to other units while consuming power from Discom at Vishnupuram for a period of 3 to 4 days in a month to consume minimum units based on billing demand recorded. In this regard we request to consider Waival of minimum units consumption on billing demand recorded in that month since there has been power shortage in Telangana State and also these units can be utilized by some other customers across the line.

(OR)

Alternatively we may be allowed to consume the minimum units to be consumed in Vishnupuram at other unit in Malkapur (RR-708) falling under same Discom TSSPDCL along with minimum units of that Unit also.

Illustration: The India Cements, Vishnuupram (Nlg-162) CMD is 20000 KVA and billing demand is 16000 KVA. Minimum units to be consumed in a month are 800000 kvah.

We have another unit at Malkapur (RR-708) to which we are exporting power from Vishnupuram. The minimum units to be consumed at Vishnupuram ie 800000 lakh units per month may be allowed to be consumed at Malkapur plant along with their minimum units consumption.

By this arrangement vishnupuram CPP Plant can be run continuously and power can be exported uninterruptedly so that specific heat losses can be reduced.

4) Open Access units drawn by other unit located in Malkapur from the captive power plant located in Vishnupuram should get adjusted in CC Bill of that month of Malkapur itself so that Malkapur unit need not pay electricity charges for the units imported from the Vishnupuram plant.

5A) Though it may not be directly related to the Tariff related issue we would like to bring to your kind notice with a hope you may consider appropriately that the inadvertent units arise at the consumer end should also be reduced from CC bill at least for power drawn from captive power plants.

5B) Similarly excess units pumped into the grid by the generator either inter or intra state open access more than scheduled units should be paid back to the generator as it is not practically possible to pump in to the system consistently the exact quantum of schedule units in 15 minutes cycle similar to the system of UI charges as applicable in case of excess units consumed.

Hope these points will be considered favourably.

Thanking you,

Yours Faithfully,
For The India Cements Ltd.

P.V.Y.N.SOMAYAJULU,
GENERAL MANAGER (F&A).
